EDUCATION

B.Tech in Computer Science*Expected 2028*

Manav Rachna University, Faridabad, Haryana

Relevant Coursework: Data Structures & Algorithms, RDBMS, Operating Systems, Computer Networks, Object-Oriented Programming

SKILLS

Languages & Databases: Python, SQL, C, C++

AI / ML: Machine Learning (scikit-learn), NSL-KDD dataset, Data Analysis, Feature Engineering

Tools & Platforms: Git, GitHub, Docker, Figma, Android Studio, Cisco Packet Tracer, Virtual Machine

Data & Reporting: Data preprocessing, metric tracking, model performance evaluation, weekly reporting workflows

PROJECTS

Adaptive Trust-Aware Cybersecurity Defense Framework —

- Built an ML-based intrusion detection system on the NSL-KDD dataset to classify and defend against adversarial network attacks
- Implemented adversarial attack simulations (FGSM, PGD, label flipping) and measured attack success rates to evaluate model robustness
- Designed a trust gate mechanism to dynamically adjust model decisions, analyzing accuracy/security trade-offs across attack scenarios
- Performed data preprocessing, feature engineering, and model evaluation — directly applicable to data modeling and quality analysis workflows

Healthcare Management System

- Designed a 9-table relational schema from scratch including ER diagram modeling, cardinality analysis, and full normalization to Third Normal Form (3NF)
- Implemented DDL with primary keys, foreign keys, CHECK, UNIQUE, NOT NULL, and DEFAULT constraints enforcing data integrity at the database level
- Implemented Role-Based Access Control (RBAC) using PostgreSQL roles and GRANT/REVOKE, creating 4 distinct roles (admin, doctor, receptionist, patient) with security views restricting row and column level access

HabitPal — Android Habit Tracking App —

- Developed a full-stack Android app (Kotlin, MVVM, Room DB) with progress visualization via charts and streak tracking
- Integrated a third-party API and local database for offline-first data storage and retrieval

p4lang/behavioral-model — GSoC 2026 Qualification Contribution · [PR #1354](#)

- Added Bazel 8.5.0 build support for `simple_switch_grpc` in the official **P4 language reference implementation** (633 stars).
- Configured `bzlmod` dependencies (protobuf, gRPC, Boost, googletest) via `MODULE.bazel`; 23/26 tests passing
- Addressed reviewer feedback from project maintainers by refactoring PI library as an external Bazel dependency instead of vendoring it

WORK EXPERIENCE

AI Data Consultant Intern (Applied) | Deccan AI 2025

Technology Virtual Intern | Deloitte December 2025

- Completed Deloitte Technology Job Simulation, solving real-world business problems through coding and analytical tasks
- Strengthened data analysis and technical problem-solving skills applicable to AI data workflows

Software Development Intern | CODTECH IT Solutions Pvt. Ltd. Jun – Jul 2025

- Delivered four mini-projects demonstrating practical skills in data structures, file management, and programming concepts
- Applied hands-on coding principles to build reliable, maintainable software components
